ROSES

Rose growing is one of our specialties. We produce large quantities in wide assortment. With the exception of a few of the common climbers, all of our roses are low budded on multiflora japonica which is generally conceded to be the best all-around rose understock. The roots of this understock are fibrous and pliable and adaptable to most types of soil. Our method of propagating produces symmetrical well balanced plants with short shanks suitable either for pot or garden culture. All of our roses are graded carefully according to the standards of the American Association of Nurserymen.

Look over this list and note the fine assortment offered.

Prices quoted are for 2 year No. 1 grade. See the following schedule for prices of No. 1½ roses:

HANSEN SWEET CHERRY

At last, a sweet cherry that will bear in the middle-west!

This variety has been grown for many years by the late H. J. Hansen, prominent Kansas horticulturist in whose honor we have named it. We have been observing this cherry closely for a long time and are convinced that it has sufficient merit to justify our offering it to the trade.

In habit of growth and appearance of fruit Hansen resembles Montmorency. The first however, is distinctly sweet and deserves to be classed as a sweet cherry. What makes it so desirable for the middle-west is the fact that it bears good crops consistently, year in and year out, a characteristic that cannot be attributed to the standard varieties of sweet cherries.

The supply this year is very limited.
